

# Swedish 3D printer manufacturer Wematter and French Fabulous solidify a vertical with huge potential

– Expected to lead to significant increase in sales of Wematter's 3D printers to the food industry

*Wematter's Gravity SLS 3D printing system*

**Swedish 3D printer manufacturer Wematter is entering into a partnership with French powder manufacturer Fabulous. The collaboration will first provide Wematter's customers with access to a powder approved for contact with food. This creates a strong vertical based on food companies being able to save on down time in their factories on a global scale.**

Wematter and Fabulous create a unique vertical with their joint offering to the food industry. Centrally controlled and locally distributed plug-and-play SLS 3D printers loaded with a powder approved for food contact enable food companies to print 3D parts on-site at factories at record speeds. This advancement is a paradigm shift in the management of wear and spare parts, since the printed parts will keep the production up and running. The number of times that production comes to a standstill due to broken parts, and the duration of any

such standstill, can be dramatically reduced.

The vertical is further strengthened by the fact that Wematter's high-quality laser system is one of the few capable of printing the unique, patented powder.

*"Wematter has been focusing on the food industry's potential for a long time. We can finally address this market in earnest. To do so together with Fabulous, a company with 20 years of experience in the food industry, feels great!"*, said Robert Kniola, CEO and founder of Wematter.

**About Wematter AB (publ)**

Wematter's pioneering end-to-end solution is broadening commercial opportunities in a market that is set to grow sevenfold in four years and is currently worth €5 billion. Wematter's €100 000 solution makes it easier and faster for developers to create new products, or for workshops to produce durable and fully functional spare parts. The product-as-a-service business model creates the conditions for stable and recurring revenues from rent and the company's sale of manufacturing materials. [wematter3d.com](http://wematter3d.com)

**About Fabulous SAS**

Fabulous, an expert company in powder 3D printing materials, brings innovation to a market now focused on production. FABULOUS is a French company, strongly positioned in the European market, with very innovative and unique patented materials. Fabulous is revolutionizing the 3D printing industry with materials that meet the application needs of end users.
